

Of the 4 proposals reviewed, I personally feel that the A.R.R.L. proposal (RM-10867) would be the best option to consider as it would help to grow the hobby and yet continue to maintain some integrity between the different License Class Privileges that are currently in place. The only negative comment I have is why wasn't more consideration given to Current "Novice Class" Holders to be able to maintain their Legal Wattage @ 200 P.E.P. on the 10 Meter Band? At least with this proposal all Licensed Amateur Radio Operators regardless of Class will be able to share some common frequencies to communicate together whereas the current privileges doesn't allow for Novice Class and Technician Class Operators same Band Privilege. Thanks for allowing my comments....
